

AZIZAN ARTIANDI AKBAR FAUZI, B.C.S

Bandung, Indonesia | +6282118873806 | azizanartiandiakbar@gmail.com | www.linkedin.com/in/azizan-artiandi

SUMMARY

Computer Science graduate (3.79/4.00. Honours) with hands-on experience in system analysis, requirements gathering, and UI/UX Design through a university internship and independent project work. Proficient in UML modelling, business process mapping, wireframing (Figma and Axure Rp), and fullstack development (Laravel, FastAPI, React) – enabling direct collaboration with stakeholders and engineering teams. Known for analytical thinking, structured problem-solving, and the ability to translate complex user needs into clear, actionable technical specifications under tight deadlines. Delivered 2 production live projects including a live SaaS platform, a real client system, and a thesis-grade fraud detection pipeline – earning 19 badges Google Cloud Skill Boost and 9 professional certificates. Seeking a UI/UX Designer role where I can combine my design instincts and user requirements analysis experience to craft intuitive, well-tested interfaces that solve real user problems.

EXPERIENCE

Internship UI/UX Designer – Parahyangan Catholic University

Sep 2024 – Feb 2025

Digitalization Department - Bandung, West Java, Indonesia

- Delivered the full prototype design for SIPENAMAS in 2 days against a 3 day deadline; subsequently produced both low-fidelity and high fidelity wireframes within 2 days each (originally scoped at 5 days), with all deliverables accepted by the supervising mentor on first review.
- Redesigned some parts the Parent Portal web and Student Portal web UI's from scratch, completing both interface in 10 days (5 days each), ensuring visual and interaction consistency across both platforms.
- Led end-to-end redesign of the UNPAR Ticketing System: independently conducted user requirements gathering and user feedback analysis in 3 days (scoped at 5 days), identified gaps, and incorporated new menus into redesign UI – completed in 7 days with strong approval from the supervising mentor.
- Initiated UI design for UNPARONE Mobile application, progressing to mid-stage wireframes within the final week of the internship program.
- Authored presentation decks for multiple projects to communicate design decisions and user flow rationale to internal stakeholders within the Digitalization Department.
- Operated across dual roles throughout the internship – functioning as both UI/UX Designer and de facto System Analyst – applying UML, userflow mapping, and feedback synthesis to inform design direction.

Cloud Computing Cohort – Bangkit Academy 2024 – Google, GoTo & Traveloka

Feb 2024 – July 2024

Google facilitated national program – Cloud Computing Learning Path – Kampus Merdeka - Bandung, West Java Indonesia

- Complete Structured Cloud Engineering curriculum across Coursera and Dicoding Platform, earning 9 professional certificates covering IT support fundamentals, computer networking, JavaScript, & web programming, backend development, machine learning on GCP, and Google Cloud Engineer.
- Earned 19 skill badges on Google Cloud Skill Boost by completing hands-on labs and timed project quests (1-2 week deadlines), covering real-world cloud scenarios including networking, IAM, Compute Engine, Cloud Run, App Engine, VM, and API Configuration.
- Designed and enforced cloud security posture by configuring IAM roles and Firewall rules to implement least-privilege access across multi-service GCP architecture.
- Applied RESTful API design principles and integrated REST APIs into cloud-hosted backend services across coursework and project assignments.
- Capstone Project – InWarkop (6 person cross-functional team: 2 Machine Learning, 2 Mobile Dev, 2 Cloud Computing): served as Cloud and backend engineer built the application backend REST API using Hapi.js framework, deployed the backend via Cloud Run and the frontend via App Engine, delivering a fully cloud-hosted production environment.
- Achieved 86% overall score in the TBI (The British Institute) Bangkit English for Business Communication program, awarded Bangkit Academy Certificate and Kampus Merdeka Certificate upon completion.

EDUCATION

STMIK Bandung | Bandung, Indonesia

Oct 2021 – Jul 2025

Bachelor of Computer Science, Cumulative GPA: 3.79/4.00. Graduated with honour.

Learn programming language such as PHP, Python, Javascript, C++/C#, Java, Kotlin. Learn about data structure, data type, machine learning, UI/UX Design, algorithm, database, etc.

PROJECTS

Trade Income Planner – Live, Production-Deployed SaaS | 6-7 months | <https://tradeplanner.my.id>

- Independently architected and delivered a fullstack SaaS trading training, strategy and analytics platform from scratch over 6-7 months, encompassing product design, fullstack engineering, and end-to-end cloud deployment.
- Engineered a suite advanced features including AI Trading Coach (LLM-powered conversational advisor), Monte Carlo Simulation (500 iteration) risk simulation for probabilistic outcome modeling and what-if future projection, Goal Planner for income targeting, Manual Trade (live market trade) for demo trade with real-time market data from TradingView API (features inside AI Trading Coach, Glossary, Short Tutorial, Risk Management Calculator, Trade Setup Templates, Pre-check Trade, Prop Firm Challenge, Discipline Rules), History to see analytics trade and history trade, Explore to see news about crypto with Coin Desk API, Home feed and Community for social network, Subscription with monthly/yearly subscription using Lemonsqueezy payment gateway for international payment, Contact Us with SMTP for email configuration (for sent forgot password PIN and reply email without open gmail page), Chatbot AI for ask anything about strategy and analyze the current market, and Admin side to control the whole platform (suspended, delete post and user, edit user, receive email and feedback).
- Architected a decoupled system with asynchronous data flow between a ReactJS and Python/FastAPI backend, managing concurrent API calls, state synchronisation, and error boundaries across the stack.
- Deployed the backend and database to production on Azure cloud via Virtual Machine and configure a port for backend, database, frontend, and SMTP port, configured a custom domain via Hostinger, and secure the application with SSL/TLS certificates and DNS management through Cloudflare – handling the full DevOps lifecycle independently.
- Tech Stack: ReactJS, Python, FastAPI, MySQL | infra: Azure VM, Hostinger, Cloudflare (SSL/DNS).

SALUT Kota Bandung – Student Registration Form – Client Project, Production-Deployed | 2 months

- Delivered a fully functional web-based student registration system for real client within a 2 months timeline – and the project is in my Github.
- Implemented role-based access control, end-to-end CRUD operations for the admin panel, secure authentication, and a database-driven.
- Independently managed the full deployment lifecycle: hosted on Hostinger shared hosting, configure a custom domain, and handled SSL/DNS setup – taking the application from local development to a live.
- Tech Stack: Laravel 12, PHP, MySQL | Infra: Hostinger (hosting, domain, SSL/DNS).

Tiare Loom – Bag Ordering – Personal Project | 3 months

- Designed and build a complete platform for ordering bag brand over 3 months, covering the full product cycle from requirements to a deployment-ready codebase.
- Implemented a customer-facing storefront with product browsing and ordering, a secure authentication system, and an admin panel with full inventory and ordered management (CRUD) capabilities.
- Engineered with a production deployment mindset – clean MVC architecture, database-driven workflow, and structured codebase maintained on GitHub, ready for hosting deployment.
- Tech Stack: Laravel 12, PHP, MySQL.

Fraud Detection Simulation – Undergraduated Thesis Project | 5 months

- Developed as the primary undergraduated thesis project over 5 months, successfully defended and approved as the basis for graduation – demonstrating research-grade depth in applied machine learning
- Designed and implemented an end-to-end fraud detection pipeline: ingested and pre-process transactional dataset, engineered relevant features, trained and evaluated ML classification models, and benchmarked model performance across accuracy, precision, recall, F1-score metrics.
- Exposed model inference through a FastAPI service layer and surfaced real-time prediction result and visual analytics via interactive Streamlit dashboard, simulating a production-grade monitoring interface.
- Tech Stack: Python, FastAPI, Jupyter Notebook, Streamlit.

SKILLS

System Analyst & Documentation: Requirements Gathering, Business Process Mapping, User Story Writing, Use Case Analysis, Gap Analysis, Specification, User Acceptance, Testing (UAT) Support.

Modelling & Diagramming: UML (Use Case, Activity, Class, Sequence), Flowchart, ERD, Data Flow Diagrams (DFD), Draw.io, Figma, Axure RP.

UI/UX Prototyping: Low-fidelity & High-fidelity Wireframing, Interactive Prototyping, Usability Testing, User Flow Design, Figma, Axure RP.

Collaboration & Productivity: Notion (documentation & project tracking), Draw.io, Git/GitHub, Stakeholder Communication, Presentation Deck Authoring, Cross-functional Team Collaboration.

Deployment (Technical Bridge): PHP, Python, JavaScript, SQL, Laravel, React, FastAPI, Hapi.js, NodeJS, ExpressJS, MySQL, REST APIs, Blade PHP, CSS, Tailwind.

Cloud & Infrastructure: Google Cloud Platform (App Engine, Cloud Run, Virtual Machine, IAM, Firewall), Cloudflare, Git.
